Business Analysis Deliverable

Prepared: 12 September 2026

Status: Final portfolio case study

Classification: Business Confidential — internal use

Document control

Document ID: PRD-001

Version: 3.0

Status: Final portfolio case study

Business objective: Understand why revenue performance weakened in Q4, identify the regions, products and customer segments requiring management attention, and agree actions that can improve retention and delivery performance.

1. Product overview

BizLens is an evidence-first Business Analysis workspace. It connects business documents and structured data, quantifies changes, frames investigation hypotheses, identifies evidence gaps, supports recommendations and exports professional BA artefacts.

2. User problem

A dashboard can show that performance changed without explaining where management should focus, what evidence supports the finding, what remains unknown, and what action should follow. BizLens is designed to bridge that gap.

3. Target users

- Management / business decision makers
- Operations and service owners
- Customer Success and retention teams
- Sales and Product stakeholders
- Business Analysts / Analytics teams

4. Product outcomes

- A reviewer can understand the business problem and priority area quickly.
- Quantitative findings remain period-aligned and traceable.
- Hypotheses are not presented as confirmed causes.
- Recommendations identify action, owner status, measure, dependency and evidence.
- BA deliverables remain coherent across BRD, FRD, UAT and RTM.

5. Core journey

Understand context -> connect evidence -> establish baseline -> compare aligned periods -> identify priority area -> decompose drivers -> validate hypotheses -> identify gaps -> decide -> deliver -> monitor.

6. Product requirements

ID	Product capability	Priority	Primary area
P-01	Evidence ingestion and source register	High	Upload / connect
P-02	Aligned-period KPI analysis	High	Data & Insights
P-03	Priority-area and contributor analysis	High	Investigation
P-04	Operational signal analysis	High	Investigation
P-05	Evidence / hypothesis / gap classification	High	Investigation
P-06	Decision-ready recommendations	High	Recommendations
P-07	BA deliverable generation	Medium	BA Studio / Deliverables
P-08	Traceability and UAT support	Medium	Deliverables

7. Non-goals

- Automated causal claims
- Automatic business approval
- Replacing operational source systems
- Inventing targets, costs, ROI or customer outcomes

8. Success criteria

- Executive answer is understandable without a separate analyst explanation.
- Material findings have evidence IDs or explicit validation dependencies.
- Exported artefacts agree on objective, periods and evidence boundaries.
- High-priority requirements map to functional behaviour and UAT.

9. Release approach

- Release 1: evidence ingestion and KPI analysis.
- Release 2: investigation and recommendation workflow.
- Release 3: professional BA artefact generation and traceability.
- Production hardening: stakeholder validation, security, performance and governance.
