Business Analysis Deliverable

Prepared: 12 September 2026

Status: Final portfolio case study

Classification: Business Confidential — internal use

Document control

Document ID: FRD-001

Version: 3.0

Status: Final portfolio case study

Linked BRD: BRD-001

1. Purpose and scope

Define testable system behaviour supporting BizLens from evidence ingestion through analysis, investigation, recommendation and BA deliverable export.

2. Functional requirements

ID	Functional behaviour	Priority	Area	Acceptance outcome	BR link
FR-01	Display revenue, orders, customers and cancellation KPIs from connected data.	High	Dashboard	Core KPI values reconcile to source aggregation.	BR-01
FR-02	Allow decomposition by region, product, customer segment and channel.	High	Analysis	Selected dimension produces consistent grouped results.	BR-02
FR-03	Compare aligned periods using absolute and percentage movement.	High	Analysis	Q3->Q4 movement matches source aggregation.	BR-03
FR-04	Represent the management focus separately from the largest numerical decline.	High	Investigation	Focus label has a business-context basis.	BR-04
FR-05	Show SLA and support-ticket signals beside commercial movement.	High	Investigation	Operational metrics use the same comparison periods.	BR-05
FR-06	Flag insufficient cancellation evidence and suppress causal interpretation.	High	Investigation	One-cancellation evidence is explicitly treated as insufficient.	BR-06

ID	Functional behaviour	Priority	Area	Acceptance outcome	BR link
FR-07	Classify findings as observed evidence, hypothesis or evidence gap.	High	Investigation	Every material conclusion has a classification.	BR-07
FR-08	Carry evidence IDs into findings and exported recommendations.	High	Deliverables	Evidence IDs remain visible in exported output.	BR-08
FR-09	Generate recommendations containing action, owner status, measure, dependency and evidence.	High	Recommendations	Required recommendation fields are present.	BR-09
FR-10	Export coherent DOCX, PDF and XLSX BA artefacts.	Medium	Deliverables	Files open, contain expected sections and remain internally consistent.	BR-10

3. Data requirements

Element	Source	Validation	Transformation	Use	Evidence
Revenue	Sales dataset	Numeric; non-null	Sum by period/dimension	Commercial KPI	E-002,E-003
Orders	Sales dataset	Numeric; non-negative	Sum by period/dimension	Volume analysis	E-001
SLA_Achievement_Rate	Sales dataset	Expected 0-1	Mean / agreed weighting	Service signal	E-004
Support_Tickets	Sales dataset	Numeric; non-negative	Tickets / orders	Service pressure	E-005
Cancellations	Sales dataset	Numeric; non-negative	Count/rate only when sufficient	Retention analysis	E-009

Element	Source	Validation	Transformation	Use	Evidence
Region/Product/Segment/Channel	Sales dataset	Categorical	Group-by	Driver analysis	E-003,E-006,E-007,E-008

4. Exception and validation rules

- Missing core fields: block affected analysis and state the missing evidence.
- Period mismatch: do not compare unlike periods without an explicit label.
- Insufficient cancellation volume: show the evidence gap and do not infer causality.
- Conflicting source statements: retain both, identify the conflict and require validation.
- Missing business targets: show actual baseline and mark target as pending approval.

5. Non-functional requirements

- NFR-01 Usable by non-technical business reviewers.
- NFR-02 Material claims remain traceable to source evidence.
- NFR-03 Missing evidence is visible rather than silently fabricated.
- NFR-04 Exports remain readable and internally consistent.
- NFR-05 Analysis should fail safely when required data is malformed or incomplete.

6. Acceptance and traceability

No high-priority functional requirement is considered complete until its BR, user story, UAT scenario and evidence boundary are mapped. UAT status remains Not Run until an actual execution is performed.
