Document ID: BC-001

Version: 3.0

Status: Final portfolio case study

1. Decision summary

The recommended course is a focused investigation and service-recovery programme rather than an immediate broad commercial intervention. This preserves optionality while the evidence gap is closed.

2. Business problem

South revenue declined 2.1% Q3->Q4 while SLA performance weakened and support pressure increased. Business context also raises cancellation concerns, but the connected dataset has only one cancellation.

3. Options

Option	Approach	Speed	Decision risk	Assessment	Reason
A	Immediate broad pricing/product intervention	Fast	High	Not recommended	Causal/commercial evidence is incomplete
B	Focused investigation + service recovery	Moderate	Lower	Recommended	Directly addresses evidence-backed priority
C	Wait without targeted action	Slow	High	Fallback only	Delays learning and recovery

4. Expected benefits

- Faster identification of the operational failure point.
- Better targeting of commercial intervention.
- Reduced risk of acting on an unsupported causal assumption.
- Clearer ownership and KPI governance.

5. Costs and assumptions

Expected effort is primarily analyst, Operations, Customer Success, Sales and Product time plus access to the required evidence. Monetary cost, savings and ROI are intentionally not estimated because the source evidence does not provide approved assumptions.

6. Decision gates

Gate	Evidence required	Decision owner	Decision
Gate 1	Customer/order-level retention evidence obtained	Business Owner	Proceed / hold
Gate 2	South operational cause validated	Operations + Business Owner	Recover / investigate further
Gate 3	Highest-impact commercial pocket quantified	Sales + Product	Targeted intervention / monitor
Gate 4	Target and owner approved	Business Owner	Implement / defer
